

Organic refreshing beverages

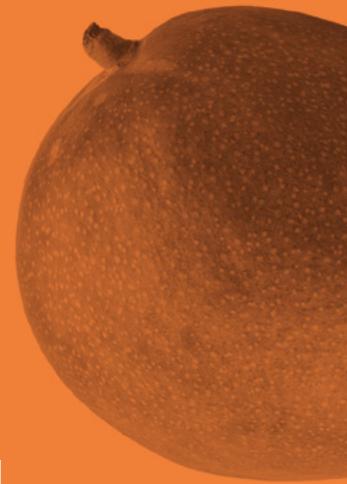

naturae®

Organic refreshing beverages

With aloe vera

Only with natural ingredients

And nothing else!

“

At **Naturae**[®], we produce simple foods, only based on natural elements, but able to make a difference. We work with traditional products, but which now bring **more benefits than ever before.**

”

naturae[®]

Organic refreshing beverages with aloe vera

our manufacturing process makes the difference.

2015	2016 - 2017	2019 - 2020
		
Best Entrepreneurial Company in Spain	Seal of Excellence in R&D	National Award 2019 & International Award 2020 for Sustainable Innovation

100% organic

100% natural

Made in Spain

HPP Technology

Natural Cold Process[®]

Naturae®.

We control the whole process from our crops to the point of sale.

Natural Cold Process®

The most Natural Process

The Naturae® extraction method with Cold Process technology allows us to keep intact all the nutrients and healthy compounds of our aloe vera, as well as the vitamins and taste of the fruit juices and infusions we use. As a result, the best of each ingredient is maximized and oxidation minimized, resulting in healthier, tastier and more environmentally friendly refreshing beverages.

The Aloe Vera we use comes **from our own organic crops located in Andalusia**, and we buy **the best fruit juices, the highest quality tea leaves and the most natural organic cane sugar** from local suppliers.

By using the Natural Cold Process® and HPP systems, we are able to produce **fresher and healthier food**, since by not subjecting them to pasteurisation we do not take away nutrients or natural properties, nor we do have to add chemical preservatives.

Controlling the production, processing and in-store delivery of Products is essential to providing that extra touch of reliability, quality and flavor that is so characteristic of our brand.

HPP Technology

No more chemical preservatives

The innovative HPP technology is the best alternative to pasteurization and to the use of chemical preservatives. To eliminate pathogens, pre-packaged foods are subjected to high pressure for short periods of time. High pressures reduce microbiological flora as effectively as heat treatments, but cold processing does not result in alterations to the healthy properties of the food, and the addition of chemical preservatives is not required. This technology is also very versatile and can be applied to practically any type of food.

Aloe Vera Specialists.

Used since the beginning of time, the Aloe Vera is a food like no other, since it provides **an enormous amount of benefits for our health.**

This natural treasure offers us **multiple healthy properties**, helping people of all ages to acquire a better quality of life.

Try the most refreshing aloe!

- ✓ We only use fresh Aloe Vera leaves from our own organic crops in Andalusia.
- ✓ We use only natural and organic ingredients.

Regulator of digestive disorders (peptic ulcer, gastroenteritis, inflammatory colitis, digestive problems due to stress, anxiety, etc.).

Regulator of the immune system (indicated for people who suffer stress, tiredness or anxiety that lead to a lowering of the defenses).

It stimulates the absorption of nutrients facilitating their assimilation and has anti-inflammatory and antioxidant effects.

Organic refreshing beverages with aloe vera

Naturae® refreshing beverages are the best ally for those who take care of their health but who do not want to give up the best taste. A 100% organic product. Natural and suitable for vegans.

Our drinks are made from water, aloe vera, the most natural organic cane sugar and fruit juice or infusion of tea leaves traditionally prepared with the best technology. The ideal way to refresh, avoiding artificial colourings, chemical preservatives or thermal treatments that affect the properties of the product.
